

CASE STUDY

KING LIBRARY MIAMI UNIVERSITY

The King Library on the Oxford, Ohio Campus of Miami University was a major renovation project requiring the logistic skills of the university's facilities staff as the library remained open and in full operation during all phases of construction and furniture installation. Central Business Group worked with the university to insure a smooth transition. Miami University selected Buckstaff's technical furniture line and Spacesaver cantilevered shelving for the products' style, durability and strength. The technical furniture line includes powered study carrels with data jacks for personal student PC use. In addition, each study table is equipped with full power and data outlets. The on-line and electronic card catalogs stations offer the staff a clean look; while offering the students quick and easy access to the equipment. The modular flexibility of the computer lookup centers is another helpful benefit of the technical furniture line.
